

Firmaoil

Firmaoil is a powder that makes it possible to utilize oils, such as hemp, CBD, cod liver, coconut, omega, and flaxseed, in tablet compression, capsule filling, and/or powder mixing formulas.

With Firmaoil, you will be able to pioneer new products or greatly improve existing formulas with a range of new raw ingredients that were unusable before. By opening the door to new ingredients with which you could experiment and create tablets or capsules, Firmaoil could mean the difference between your business going through the motions of mediocrity and becoming a market leader.

Derived from pharmaceutical grade and food-safe calcium phosphate, our Firmaoil is 100% safe for human consumption and can give you the best of both worlds—you can research and develop with previously off-limits but potentially life-changing ingredients without needing to spend tens of thousands on machinery such as a liquid capsule filler.

Main Benefits of Firmaoil

- **High Absorption Rate** - Firmaoil has the ability to absorb up to 135% of its weight in oil.
- **Convenient** - Instead of depending on several suppliers for excipients, Firmaoil can be ordered on our website in seconds. It is in stock at all times in LFA's UK, US, and Taiwan offices and can be dispatched same or next working day so production can keep going.
- **Saves Money** - You can simply use Firmaoil to research and develop a formula, leading to a successful business without the excessive costs of investing in an oil capsule filler.
- **100% Safe for Human Consumption** - Firmaoil is made from calcium phosphate, which is responsible for strong and healthy bones, healthy blood flow, assisting muscle contractions, and aiding communication between nerves. It is also Halal and Kosher certified.

Specifications

Appearance	White/colored powder
Physical state	Solid
Odor	Odorless
Storage	In a cool place away from moisture and direct sunlight
Physical components	Pentacalcium hydroxide tris(orthophosphate)
Bulk density	0.51 g/cm ³
