# Important Safety Information

## READ THIS BEFORE OPERATING MACHINE

### Intended Use

The intended use of this machine is to fill empty capsules with dry raw materials.  
Potential misuse of this machine includes:

- Using any capsules that deviate from the standard two-piece design.
- Using softgel capsules.
- Spreading powder over the capsule bodies with the machine's cleaning brush instead of the formulation scraper.
- Using powders that could explode under pressure.
- Using wet or damp material.

### General Hazards

- Keep out of reach of children.
- Keep fingers away from all moving parts.
- Inspect the manual capsule filler before use.
- During operation, cleaning, and maintenance, keep fingers away from the Tamping Plate when pulling it down.
- Use this manual capsule filler only for its intended use as described in this manual.
- Do not modify the machine in any way.

### Personal Protection

For personal protection while operating the PharmaCap™ Capsule Filler, abide by these actions:

- Avoid wearing loose jewelry to prevent entanglement.
- Contain long hair to prevent entanglement.
- Wear safety goggles.
- Wear disposable latex/rubber gloves.
- Wear a hairnet (food grade products only).
- Wear a beard net if needed (food grade products only).

# Important Safety Information

READ THIS BEFORE OPERATING MACHINE

## Symbols

### WARNING

This signals potential risk for personal injury.

### CAUTION

This signals potential risk for damage to the machine or other parts.

## Modes for Stopping

In the case of an emergency, immediately stop operating and remove yourself from the PharmaCap™ Capsule Filler.

## Prop. 65 Statement for CA Residents

Based on LFA's current level of knowledge of our machines, PharmaCap™ Capsule Fillers do not require a Proposition 65 warning label.

## Warning for Explosive Material

This machine is not explosion proof. LFA recommends that you test your materials' explosivity before running them through this machine. If your materials are indeed explosive, do not use them with this machine.

**4. Eccentric Pin**
- 5. Eccentric Pin Handle**  
**6. Large Lever**  
**7. Base**

# Preface

The PharmaCap™ is a compact and lightweight desktop capsule filler that is one of the fastest on the market. With its mechanical tamping system to ensure consistent capsule weights, the PharmaCap™ is not only easy to operate and service but is also made from stainless steel, ensuring durability and hygiene. With its speed at producing capsules and ability to quickly change between different capsule sizes, the PharmaCap™ is a versatile and affordable option for a capsule filler.

The purpose of this document is to support your understanding of the PharmaCap™ Capsule Filler components, features, functions, and design. With this manual, you will be able to successfully operate and maintain your PharmaCap™ Capsule Filler.

The user manual’s content includes:

- Important safety information
- PharmaCap™ installation instructions
- Description of the PharmaCap™’s operation
- PharmaCap™ maintenance information
- Appendix with supplemental information

# Training

Machine training can be beneficial for its successful operation and your personal safety. There are several methods to prepare you for working with your capsule filler.

## In-Person Training

LFA offers free training at our UK, USA, and Taiwan facilities for all our customers and their teams. For more information, go to <https://www.lfacapsulefillers.com/services>

## Training via Video Chat/Phone

Using an online video chat system, an LFA technician can interact face-to-face with you and assist with your understanding of the machine. Or, if you prefer, LFA can provide training via phone for all customers who call the office. To set up a training, call or email your local LFA office:

**UK**  
**Phone**  
+44 01869 250234  
**Email**

## LFA Articles

LFA writes informative articles about our machines, which includes instructions, procedures, and guides. To access the articles, go to <https://www.lfacapsulefillers.com/articles>

## LFA Videos

LFA has created several videos involving our machines. To access the videos, go to <https://www.lfacapsulefillers.com/videos> or <https://www.youtube.com/user/TabletPilPress>

# Installation

## Tools and Materials Needed

Before you install and operate the PharmaCap™ Capsule Filler, it is best to have the following tools and materials on hand for general operation and maintenance:

- Set of metric Allen keys with ball ends
- Set of metric wrenches
- Vise grip/pliers
- Rubber mallet
- Scoop/spoon for powder
- Lubricant (NSF approved for food grade products)
- Long wire pipe cleaner
- Toothbrush
- Cleaner (e.g. Member's Mark Commercial Lemon Fresh Disinfectant)
- Sanitizer (e.g. Member's Mark Commercial Sanitizer)
- Clean cloths
- Bagless vacuum
- Safety goggles
- Disposable latex/rubber gloves
- Hairnet and/or beard net (food grade products only)
- Sterile shoe covers (food grade products only)

## The Appropriate Workstation for the Machine

Find a clean, stable, and level workspace that supports the PharmaCap™'s 40 kg (approximately 88 lbs) weight.

### Environmental Conditions

It is important that the environment in which you operate and store the PharmaCap™ Capsule Filler has the appropriate temperature and relative humidity levels. These two environmental factors can potentially cause the machine to rust and/or cause the capsules to have a lower quality. The table below shows the acceptable temperature and relative humidity levels:

Machine	Temperature		Humidity
	°C	°F	
	18-24	64-75	
PharmaCap™ Manual Capsule Filler			45-55% RH

The shipment will contain the following:

1. The PharmaCap™ Capsule Filler

2. Formulation Scraper
3. Tamping Tool
4. Cleaning Brush

5. Powder Guard
6. 2 Capsule Holding Trays

### PharmaCap™ Capsule Filler Process

The basic mechanism of the PharmaCap™ involves separating the capsules, filling the capsules with powder, and sealing the capsules.

#### Sorting the Capsules

The capsules are inserted into the holding tray and placed on the machine. After the front knob is turned clockwise, the capsule bodies are secured by pulling forward the eccentric pin handle. Once the knob is turned counterclockwise, the capsule caps are lifted from the tops of the capsule bodies when the long lever is pulled down, and the capsule bodies fall into the filling position.

#### Filling the Capsules with Powder

The powder guard is put on the machine and is filled with powder. The formulation scraper ensures that the powder covers all of the capsule bodies. The powder is then compacted by the tamping plate, and the excess powder is redistributed over the capsule bodies by the formulation scraper. This process is repeated until the capsule bodies are full with powder.

#### Sealing the Capsules

Once the tray with the capsule caps is back on the machine, the cap locking plate is lowered and secured into place. After that the knob is turned clockwise and the large lever is pulled down, which seals the capsules. Then, the cap locking plate is lifted and the front knob is turned counterclockwise. Once the lever is pulled down again, the holding tray can be removed along with the filled capsules.

## How to Create Capsules with the PharmaCap™ Capsule Filler

To watch a video on this process, go to <https://www.lfacapsulefillers.com/using-your-pharmacap-capsule-filler>

### Tools and Materials Needed

- Raw ingredients
- Empty capsules (purchase at <https://www.lfacapsulefillers.com/products/empty-capsules>)
- PharmaCap™ Capsule Filler and accessories
- Scoop/spoon for powder
- Safety goggles
- Disposable latex/rubber gloves (for food grade products and to protect hands from grease)
- Hairnet and/or beard net (food grade products only)
- Sterile shoe covers (food grade products only)

**WARNING:** For personal protection while operating the PharmaCap™ Capsule Filler, contain long hair and do not wear loose jewelry.

### Instructions

Note: Wear latex/rubber gloves (and appropriate food grade attire if applicable) during this process.

1. Ensure that the eccentric pin handle is forward and that the front knob is turned counterclockwise.

2. Insert empty unseparated capsules into the holding tray.  
2.1 Note: Ensure that the capsules are inserted body-side down.

3. Gently press down on the capsules with the tamping tool.

4. Place the holding tray with the empty capsules onto the PharmaCap™ and turn the front knob clockwise.

5. Pull the eccentric pin handle towards you to secure the capsule bodies and turn the front knob counterclockwise.
6. Push down the large lever to lift the capsule caps off the capsule bodies.

7. Remove the holding tray with the caps and set aside.  
7.1 Note: Ensure to remember the direction of the holding tray. It is important that the separated caps are later sealed with their original bodies.

8. Push back the eccentric pin handle to release the capsule bodies into the PharmaCap™.

9. Run the tamping tool over the PharmaCap™ to ensure that the capsule bodies are fully inserted and flush with the sliding sheet top section.
10. Place the powder guard onto the PharmaCap™.

11. Scoop powder onto the PharmaCap™ with a spoon.

12. Use the formulation scraper to spread the powder evenly over the capsule bodies inside the PharmaCap™ and push the excess powder towards the right reservoir.

12.1 Note: Do not use the cleaning brush provided with the machine to spread the powder as it may cause weight variation in the capsules.

13. Carefully lift up the powder guard from the PharmaCap™.

14. Lower the tamping plate carefully and lock it.

**WARNING:** Keep fingers out of the way when lowering the tamping plate.

15. Rotate the handle clockwise to its limit.

16. Loosen the handle by turning it counterclockwise and unlock and raise the tamping plate.

17. Place the powder guard back onto the PharmaCap™ and redistribute the excess powder with the formulation scraper into the capsule bodies.

18. Repeat steps 14-16 until the capsule body is full with powder.

19. Place the holding tray with the capsule caps back onto the PharmaCap™ and over the filled capsule bodies.

19.1 Note: Ensure that the separated caps are aligned with their original bodies.

20. Lower the cap locking plate onto the holding tray and lock it into place.

21. Turn the front knob clockwise.

22. Push down the lever 2-3 times to apply sufficient pressure to seal the capsules.

23. Raise the cap locking plate and turn the front knob counterclockwise.

24. Push down the lever again to raise the holding tray with the sealed capsules.  
25. Lift up and remove the holding tray from the PharmaCap™.

26. Push out the filled capsules from the holding tray.

## Settings and Adjustment

The PharmaCap™ Capsule Filler's Tooling sizes can be easily changed.

### Capsule Size Changes for #00, #0, #1, & #2 (Size L) OR #3 & #4 (Size M)

If you want to change size of a capsule, it is necessary to change the Tooling.

Note: The PharmaCap™ size ranges of #00-#2 (size L) and #3-#4 (size M) use two different bases. Therefore, it is only possible to change sizes within each range (e.g. from #00 to #0; from #3 to #4).

#### Tools and Materials Needed

- Metric set of Allen keys with ball ends
- Disposable latex/rubber gloves (for food grade products and to protect hands from grease)
- Hairnet and/or beard net (food grade products only)
- Sterile shoe covers (food grade products only)

**WARNING:** For personal protection while adjusting the PharmaCap™ Capsule Filler, contain long hair and do not wear loose jewelry.

**WARNING:** Keep fingers out of the way when lowering the tamping plate.

#### Instructions

Note: Wear latex/rubber gloves (and appropriate food grade attire if applicable) during this process.

#### Remove the Tooling

1. Remove the four bolts on the sliding sheet top section by hand.

2. Loosen the set screw and nut from the eccentric pin handle.

3. Remove the eccentric pin handle and eccentric pin from the machine.

4. Remove the sliding sheet top section from the machine.
5. Lower the cap locking plate.
6. Loosen the nuts of the cap locking plate by hand until the two spacers disengage from the handle.

7. Remove the two spacers.

#### Replace the Tooling

8. Insert the new spacers onto the cap locking plate handle bolts.

9. Retighten the cap locking plate nuts by hand.

10. Insert the eccentric pin into the new sliding sheet top section.

10.1 Note: Ensure that the mark on the eccentric pin is in the same direction of the mark on the new sliding sheet top section.

11. Place the new sliding sheet top section with the eccentric pin into the PharmaCap™ base.

12. Insert the eccentric pin handle back onto the eccentric pin and secure it with the set screw and nut.

13. Resecure the four bolts on the new sliding sheet top section by hand.

## Maintenance

To ensure that the PharmaCap™ Capsule Filler will have a long operational life, maintenance is essential. This section includes methods for troubleshooting solutions and how often to grease and clean your machine to keep its performance optimal.

### General Maintenance Prescriptions

- Use the maintenance checklist (found in the Appendix) before, during, and after machine operation.
- Make sure all grease points are maintained and regularly lubricated.
- Use an appropriate amount of lubricant.
- After cleaning the machine, make sure that the parts are dried and oiled.

### Lubrication

Regularly greasing your machine is vital to prolonging its operational life. Parts that are not greased properly can make the capsule filler seize up and cause major problems later. LFA recommends maintaining a lubrication schedule for your PharmaCap™ Capsule Filler, which can be found in this section.

#### Tools and Materials Needed

- NLGI Grade 1 grease
- NLGI Grade 2 grease
- Mineral oil
- Disposable latex/rubber gloves (for food grade products and to protect hands from grease)
- Hairnet and/or beard net (food grade products only)
- Sterile shoe covers (food grade products only)

**WARNING:** For personal protection while maintaining the PharmaCap™ Capsule Filler, contain long hair and do not wear loose jewelry.

**WARNING:** Keep fingers out of the way when lowering the tamping plate.

### Instructions

Note: Wear latex/rubber gloves (and appropriate food grade attire if applicable) during this process.

1. Apply mineral oil to the hinges of the tamping plate, eccentric pin handle, large lever, and cap locking plate.

2. Apply mineral oil to the handle threads on top of the tamping plate.

3. Apply NLGI grade 2 grease onto the eccentric pin.

4. Apply NLGI Grade 1 grease to the cogs underneath the machine.

Lubrication Schedule

LFA recommends the following PharmaCap™ Capsule Filler parts to be lubricated according to the following frequency:

Part	Location	Image	Frequency	Type of Lubricant
Tamping Plate Handle	The handle threads on top of the tamping plate that locks it into place		After cleaning	Mineral oil
Eccentric Pin Handle	Handle on the side that is pulled to separate capsule caps and bodies in the PharmaCap™		After cleaning	Mineral oil
Large Lever	The point at which the side large lever hinges on the PharmaCap™		Every 100 hours/once per week	Mineral oil
Eccentric Pin	Pin near the large lever that goes through the top section		Every 2-3 months or after cleaning	NLGI Grade 2
Cogs	Underneath the PharmaCap™		Every 2-3 months or after cleaning	NLGI Grade 1

Cleaning

After the PharmaCap™ Capsule Filler's operation, powder may accumulate in the tamping pin plate and other parts of the machine. It is important to clean the PharmaCap™ Capsule Filler thoroughly to prevent rusting and cross contamination.

LFA recommends that the machine be cleaned after each operation.

Tools and Materials Needed

- Bagless vacuum
- Set of metric wrenches
- Set of metric Allen keys
- Vise grips or pliers
- Long wire pipe cleaner
- Toothbrush
- Cleaner (e.g. Member's Mark Commercial Lemon Fresh Disinfectant)
- Sanitizer (e.g. Member's Mark Commercial Sanitizer)
- Potable water and clean cloths
- Disposable latex/rubber gloves
- Hairnet and/or beard net (food grade products only)
- Sterile shoe covers (food grade products only)

**CAUTION:** Because the PharmaCap™'s main base is made from cast iron with chrome plating, it is not recommended to wash it with water.

Instructions

Note: Wear safety goggles and latex/rubber gloves (and appropriate food grade attire if applicable) during this process.

Clean the PharmaCap™ Capsule Filler and Accessories

1. Remove all residual material from the PharmaCap™'s exterior with the cleaning brush and a bagless vacuum.
2. Remove the four bolts on the sliding sheet top section by hand.

3. Loosen the set screw and nut from the eccentric pin handle.

4. Remove the eccentric pin handle and eccentric pin from the machine.

5. Remove the sliding sheet top section from the machine.

6. Pull out the sliding sheets from the top section.

7. Use a wire pipe cleaner and/or toothbrush to clean difficult-to-remove debris on the capsule body plate.

8. Remove the four set screws on the capsule body plate.

9. Carefully turn over the machine to access the capsule body plate.

9.1 Note: Ensure to account for the machine's weight to prevent personal injury.

10. Remove the knurled screws and springs by hand.

10.1 Note: If the knurled screws and springs are difficult to remove, use a vise grip or pliers.

11. Push out the capsule body plate from the machine's base.

11.1 Note: If the capsule body plate is difficult to remove, use a rubber mallet to push it out of the machine's base.

12. Use the cleaner on the capsule body plate, wash off the cleaner with water, and immediately dry the capsule body plate with a clean cloth.

13. Sanitize the capsule body plate with a clean cloth and reassemble it to the machine.

14. Use a wire pipe cleaner and/or toothbrush to clean difficult-to-remove debris on the tamping plate.

15. Remove the screws on the tamping plate from the handle with an Allen key and take off the tamping plate.

16. Use the cleaner on the tamping plate, wash off the cleaner with water, and immediately dry the tamping plate with a clean cloth.

17. Sanitize the tamping plate with a clean cloth and reassemble it to the machine.

18. Use the cleaner on the cap locking plate, wash off the cleaner with water, and immediately dry the cap locking plate with a clean cloth.

19. Sanitize the cap locking plate with a clean cloth.

20. Take the sliding sheets and the top section and submerge them in the water.

21. Use a wire pipe cleaner and/or toothbrush to clean difficult-to-remove debris on the sliding sheets and the top section.

22. Use the cleaner on the sliding sheets and top section, wash off the cleaner with water, and immediately dry them with a clean cloth.

23. Sanitize the sliding sheets and top section with a clean cloth.

24. Take the powder guard and the capsule holding tray and submerge them in the water.

25. Use a wire pipe cleaner and/or toothbrush to clean difficult-to-remove debris on the powder guard and the capsule holding tray.

26. Use the cleaner on the powder guard and capsule holding tray, wash off the cleaner with water, and immediately dry them with a clean cloth.

27. Sanitize the powder guard and the capsule holding tray with a clean cloth.

28. Submerge the PharmaCap™ accessories in the water.

29. Use a wire pipe cleaner and/or toothbrush to clean difficult-to-remove debris on the accessories.

30. Use the cleaner on the accessories, wash off the cleaner with water, and immediately dry the accessories with a clean cloth.

31. Sanitize each accessory with a clean cloth.

Part	Frequency							
	After installing machine	After every use	Before every use	In between products that present a cross contamination risk	Weekly	Monthly	Before placing in storage	After removing from storage
Capsule Holding Tray	Remove from machine	Remove from machine	Remove from machine	Remove from machine	N/A	N/A	Remove from machine	Install on machine

Cleaning Level Key	
Level 1 - Remove powder	
Level 2 - Dry clean with cloth	
Level 3 - Dry clean and re-lubricate if specified in lubrication schedule	
Level 4 - Wet clean and re-lubricate if specified in lubrication schedule	
Remove from machine - Take part out of machine and clean if required. Store it correctly or install back into machine.	
Install into machine - Install part into the machine and make sure that it has been cleaned. If needed, lubricate to the level required.	
Clean on/in machine - Clean the part while in the machine and do not remove it. Make sure that all contact surfaces are clean to the level required.	

This cleaning matrix is intended as a guide only and is not an exhaustive list. All cleaning schedules will need to be adapted to the industry and product, following industry regulations and the material safety data sheets that come with specific products. Please check with your Food Safety Manager/Department, Quality Control Manager/Department, or other relevant internal departments at your company before using.

Troubleshooting

Sometimes unavoidable issues will occur while operating the PharmaCap™ Capsule Filler. Fortunately, there are several methods to remedy these issues.

Common Issues

Symptom	Possible Cause	Possible Solution
Capsules are not separating	The eccentric pin handle is not in the correct position.	Pull the eccentric pin handle towards you to the maximum position.
	The eccentric pin that connects the eccentric pin handle is worn.	Replace the eccentric pin.
Inconsistent capsule weights	The pins of the tamping plate are uneven.	Inspect the tamping plate for any damage and replace if needed.
	There is not enough powder.	Increase the amount of powder and ensure that it is evenly distributed over the capsule bodies with the formulation scraper.
Capsules are not sealing	The capsule loading tray is not lining up correctly with the PharmaCap™ base.	Inspect the alignment and adjust if needed.
	The cap locking plate has incorrect spacer sizes.	Replace the spacers.
	The large lifting lever is not pressed to the required extent.	Press the lever more until it is fully down.
Capsules are splitting	The capsule loading tray is not lining up correctly with the PharmaCap™ base.	Inspect the alignment and adjust if needed.
	The capsules have been exposed to moisture.	Improve capsule storage conditions.
Capsules are sealing unevenly	The cap locking plate has incorrect spacer sizes.	Replace the spacers.
	The top section of the sliding sheet is damaged.	Replace the top section and sliding sheet.
Improperly closed capsules	There is damage to the body-cap interface (sealing area).	Replace the damaged capsules.
Dusty capsules	Capsules are not being polished.	Use a capsule polisher after filling capsules. Order one from LFA at <a href="https://www.lfacapsulefillers.com/cp7000-capsule-polisher">https://www.lfacapsulefillers.com/cp7000-capsule-polisher</a>

# Storing the PharmaCap™ Capsule Filler

After its thorough cleaning, the PharmaCap™ Capsule Filler needs to be stored in the proper conditions. It is important to store it in an environment in which the machine is safe from rusting. The PharmaCap™'s high traction areas need to be lubricated before storing it.

## Tools and Materials Needed

- Mineral oil
- NLGI Grade 1 and Grade 2 grease
- Disposable latex/rubber gloves (for food grade products and to protect hands from lubricant)
- Hairnet and/or beard net (food grade products only)
- Sterile shoe covers (food grade products only)

## Instructions

Note: Wear latex/rubber gloves (and appropriate food grade attire if applicable) during this process.

### Lubricate the Handles and Large Lever

Lubricate the tamping plate's handle threads, the eccentric pin handle, and the large lever with mineral oil.

### Lubricate the Eccentric Pin and Cogs

Apply NLGI Grade 1 and Grade 2 grease to the cogs underneath the machine and the eccentric pin.

If the capsule filler is not to be in use for a long time, close and lock the tamping plate and lower the cap locking plate to minimize any chance of damage to the machine.

## Environmental Conditions

It is important that the environment in which you store the PharmaCap™ has the appropriate temperature and relative humidity levels. These two environmental factors can potentially cause damage to the machine. The table below shows the acceptable temperature and relative humidity levels:

Machine	Temperature		Humidity
PharmaCap™	°C	°F	45-55% RH
	15-28	59-83	

# Appendix

## Glossary

Term	Definition
API/Active Pharmaceutical Ingredient	Any substance or mixture of substances used that is an active ingredient in the drug product.
Cap Locking Plate	Component of the PharmaCap™ that presses down the capsule caps onto the capsule bodies.
Capsule Holding Tray	Component of PharmaCap™ that holds capsules on top of the machine's base.
Excipient	An inactive substance that serves as the vehicle or medium for a drug or other API.
Formulation	Powder mix of the excipient and the API.
Formulation Scraper	PharmaCap™ accessory that helps spread powder over the holding tray and into the capsule bodies.
Powder Guard	Component of PharmaCap™ that allows powder to be spread over the capsule bodies and prevents it from spilling over the base.
Tamping Plate	Component of the PharmaCap™ that has pins that press down powder into the capsule bodies.
Tamping Tool	PharmaCap™ accessory that helps with pushing down capsule bodies into the machine.

## Material of Contact Parts

Contact Part	Material
PharmaCap™ Base	SS304
Capsule Holding Tray	SS304
Tamping Plate	SS304
Cap Locking Plate	SS304
Formulation Scraper	Teflon
Tamping Tool	Teflon

Technical Specifications

Maximum Output/Hour	6,000-7,200
Compatible capsule sizes	00 / 0 / 1 / 2 / 3 / 4
Filling precision	± 3%
Weight	40 kg / 88 lbs
Length	428 mm / 16.8 in
Height	452 mm / 17.8 in
Width	308 mm / 12.1 in

Bores per Plate

Plate Size	Number of Bores/Plates	Maximum Output/Hour
#00	300	6,000
#0	300	6,000
#1	300	6,000
#2	300	6,000
#3	300	6,000
#4	300	6,000

Maintenance Checklist

Before Operation	
<input type="checkbox"/>	Visually inspect the capsule filler and the parts.
<input type="checkbox"/>	Ensure all nuts and bolts are tight.
<input type="checkbox"/>	Operate the capsule filler with no powder to ensure it is not jammed.
During Operation	
<input type="checkbox"/>	Watch for buildup of powder in the capsule loading plate, tamping plate, and powder guard.
<input type="checkbox"/>	Weigh a few sample capsules to ensure the desired weight and fill are being met.
After Operation	
<input type="checkbox"/>	Remove all excess powder with a bagless vacuum.
<input type="checkbox"/>	Dismantle the PharmaCap™ and clean all its parts.
<input type="checkbox"/>	Wipe down the other surfaces with a damp cloth and dry with the cleaning cloth.
<input type="checkbox"/>	Apply grease to all the hinges of the handles and lever.
<input type="checkbox"/>	Store the PharmaCap™ in a clean, dry, and cool place.
