

ProCap® Manual Capsule Filler

The ProCap® is designed for the individual or organization wanting to create their own supplements at home or test and develop new concepts in the early stages of R&D.

The ProCap® is able to produce batches of 120 #00 capsules at a time. Cost-effective and free to run, there are no running costs with the ProCap® and it is just a fraction of the price of a high output capsule filler; it's now more affordable than ever to take your ideas from being just ideas to real capsules that can be tested and improved upon or even sold.

If you have at least one project you've been on the fence about starting, the ProCap® is the tool that allows you to get started without investing thousands and without spending your valuable time learning how to use a more complicated machine.

Main Benefits of the ProCap®

- Made from certified food grade, BPA-free plastic to prevent unsafe materials from seeping into your capsules.
- Saves time by being easy to clean and dishwasher safe, allowing you to focus on more important things.
- Designed to produce consistent results and reduce waste, so that you get the most out of your money and each capsule has the same effect on you or your customers' body.
- Can fill vegetarian or gelatin capsules, so that it gives you or your customers as much control as possible as to what goes into you or their bodies.
- Can be used for vitamins, herbs, pharmaceuticals, or any kind of powders.
